Result-driven computer science undergraduate with a strong foundation in full-stack development and a passion for building intelligent systems. Skilled in developing end-to-end AI/ML applications. Proficient in Python, Java, C, and HTML/CSS/JS. Collaborative in team environments, and deliver scalable, user-centric solutions that bridge the gap between innovation and impact.

## EDUCATION

|                                                                                           |            |             |
|-------------------------------------------------------------------------------------------|------------|-------------|
| <b>Bachelors in Computer Science</b> <i>Amrita Vishwa Vidyapeetham, Amritapuri Campus</i> | CGPA: 8.76 | 2024 - 2028 |
| <b>Higher Secondary Education</b> <i>Shirdi Sai Vidyapeetham</i>                          |            | 2022 - 2024 |
| <b>Secondary Education (SSC)</b> <i>St. Ann's EM School</i>                               |            | 2020        |

## SKILLS

|                                |                                                              |
|--------------------------------|--------------------------------------------------------------|
| <b>Technical Skills</b>        | Python, Java, C, HTML, CSS, JS                               |
| <b>Soft Skills</b>             | Communication, Problem Solving, Team Work, Critical Thinking |
| <b>Artificial Intelligence</b> | ML, AI Agents, Deep Learning                                 |

## PROJECTS

**Expense Tracker Web App** – Developed a PHP-based financial tracking application that enables users to log daily expenses, categorize spending, and visualize budgeting insights. Included real-time record updates, delete functionality, and dynamic balance calculations. (*PHP, MySQL*)

**FunDaMentals – Gamified Java Learning App** – Built an interactive learning platform to teach Java programming via gamified modules. Integrated quizzes, minigames, and a progress tracker to boost engagement and reinforce core concepts. (*Java, GUI, OOP*)

**RAG-Based Chatbot** – Engineered a Retrieval-Augmented Generation chatbot leveraging vector databases (e.g., FAISS or Chroma) for contextual grounding. Indexed documents and integrated a language model to deliver precise responses aligned with retrieved content. (*FAISS/Chroma, LLM, LangChain*)

**Customer Churn Prediction Model** – Designed and trained a machine learning model using structured banking data to predict customer churn. Engineered features like credit score, age, balance, and tenure; evaluated models using confusion matrix. (*Python, scikit-learn, Pandas, Matplotlib*)

## ACHIEVEMENTS

**Member, SIG-AI ACM Student Chapter** Oct 2024 – Nov 2025  
Applied machine learning techniques on real-world datasets using PyTorch and scikit-learn, focusing on practical problem-solving.

- Contributed to organizing AI bootcamps and coding challenges, promoting peer-to-peer learning.
- Collaborated on community-driven AI projects, enhancing teamwork and technical leadership.
- Attended many hackathons and build some of my Best works

**AI-ML Intern Coirei** Feb 2026 - Present  
Experience in a real world Application is new and absolutely Wonderful, I'm learning many new things.

- Built backend infrastructure for AI agent systems that automate code debugging, repository analysis, and development workflows.
- Developed REST APIs and services using FastAPI and Python.
- Contributed to building AI-assisted DevOps tooling for improving developer productivity.
